

3/2 directional safety valve, Series SV03-AS2

2024-05-02

R412028207

Series SV03

Technical data

Industry	Industrial
Activation	Electrically
Switching principle	3/2
Compressed air connection output	Ø 13
Operational voltage DC	24 V
Voltage tolerance DC	-10% / +10%
Actuating control	Single Solenoid
Sealing principle	Soft seal
Pilot	External
Standards	ISO 13849-1, category 4, performance level: e (possible)
Return	With spring return
Compressed air connection input	Ø 13
Compressed air connection, exhaust	G 1/2
Power consumption DC	1.5 W
Min. working pressure internal	3 bar
Max. working pressure internal	10 bar
Min. working pressure external	0 bar
Max. working pressure external	10 bar
Min. control pressure	3 bar

3/2 directional safety valve, Series SV03-AS2

2024-05-02

R412028207

Max. control pressure	10 bar
Min. ambient temperature	4 °C
Max. ambient temperature	50 °C
Min. medium temperature	4 °C
Max. medium temperature	50 °C
Medium	Compressed air
Max. particle size	5 µm
Min. oil content of compressed air	0 mg/m ³
Max. oil content of compressed air	5 mg/m ³
Connector standard	EN 175301-803, form C
Nominal flow Qn 1 to 2	1050 l/min
Nominal flow Qn 2 to 3	2650 l/min
Protection class with connection	IP65
Duty cycle	100 %
Typ. switch-on time	30 ms
Typ. switch-off time	70 ms
Type sensor	PNP
Electrical connection for sensor	Plug
Sensor port size	M8
Sensor number of poles	3-pin
Weight	1.9 kg
Housing material	Die-cast aluminum
Seal material	Acrylonitrile butadiene rubber
Part No.	R412028207

Technical information

silencer (not included in scope of delivery)

Directional safety valve series SV is delivered and configured for internal control pressure. It can easily be converted to external control pressure. Please refer to the operating instructions. The control pressure must be > 3 bar.

The min. control pressure must be adhered to, since otherwise faulty switching and valve failure may result!

The pressure dew point must be at least 15 °C less than ambient and medium temperature and may not exceed 3 °C.

The oil content of compressed air must remain constant during the life cycle.

Use only the approved oils from AVENTICS. Further information can be found in the "Technical information" document (available in <https://www.emerson.com/en-us/support>).

The safety valves are designed in accordance with the requirements listed in ISO 13849-1 and -2. The safety function of the 3/2 safety valve is not only to supply compressed air (pneumatic energy) to the machine/system when the two valve elements are actuated simultaneously, but also to shut off the supply and to exhaust any downstream compressed air when both valves are switched off. A fault in the system where only 1 valve actuates when switching on or only 1 de-actuates when switching off prevents air from being supplied downstream and simultaneously exhausts any air that is already downstream. Monitoring of the two proximity sensors by the user's external monitoring system makes it possible to detect these fault situations and to shut off and prevent further electrical energization of the solenoids.

Dimensions

- 1) Port 1 (Input)
- 2) Port 2 (Output)
- 3) Port 3 (Exhaust)
- 4) Silencer
- 5) silencer (not included in scope of delivery)
- 6) Connection for soft start with plug G1/8
- 7) Connection for pressure switch with plug G1/4
- 8) Connection for external pilot supply with plug G1/8

Safe air supply and exhaust valve compatible with soft-start function

- 1) Lockout valve
- 2) Filter
- 3) Pressure regulator
- 4) Pressure gauge
- 5) Soft-start valve
- 6) Safety exhaust valve SV03-AS2
- Soft-start function
- 7) Pressure Switches

Valve plug connector form C

- 1) + 24 / 0 VDC
- 2) 0 / + 24 VDC

PIN assignment sensor, plug M8 3-pin

- 1) + 20 ... + 28 VDC
- 3) 0 VDC
- 4) OUT
